

ICE MACHINE CLEANER

THIS LIQUID ICE MACHINE CLEANER may be used to clean all types of ice-making machines.....cubes, tubes, or flakes.....and for descaling commercial dishwashers.

ICE MACHINE CLEANER is made especially for the descaling and cleaning of ice machines for heavy duty descaling of any carbonate formation.

Do not use or allow ICE MACHINE CLEANER to splash upon any surfaces or plated fixtures that are not guaranteed acid-resistant.

HOW TO CLEAN ICE MACHINES:

1. Cut off the incoming water supply and bleed so that no water can enter or leave the system.
2. Shut off the refrigeration by stopping the compressor. This will allow the ice-making surfaces to warm up. This warm up can be accelerated by running a fresh change of warm water over the machine parts.
3. Add 4 fluid ounce of ICE MACHINE CLEANER for every gallon in system.
4. Circulate the cleaning solution with an acid resistant pump. Circulation may be required for 20 minutes to 1 hour. Remove any lint or foreign debris which may be found.
5. For scaled areas not in direct contact with the cleaning solution apply chemical with a brush.
6. When the system is thoroughly clean, carefully drain ALL of the cleaning solution. Rinse with at least two complete changes of fresh water. Keep the rinse water circulating. After complete removal of all trace of chemical, return the machine to normal operation.

Carefully read all cautions for this product. Contains phosphoric acid.
