

TOWERSIDE WATER TREAT

Towerside is an effective and efficient cooling water tower treatment for use in industrial and/or commercial recirculating of liquids.

When **Towerside** is used as directed, it will aid in reducing the development of biomass deposits and algal slime formation which are unsightly, produce foul odors, and which are often the cause of equipment breakdown and loss of cooling efficiency.

Towerside is compatible with virtually all corrosion inhibition additives, but should not be used in the presence of soap or other anionic detergents. **Towerside** at use dilution is non-corrosive to inanimate hard surfaces.

Do not be alarmed with the sudden appearance of organic debris in the system during the first week of operation. This is normal and is a good indication that **Towerside** has effectively penetrated and dislodged dead organic material which tenaciously adheres to metal and wooden surfaces as living matter. This debris should be removed from the system to avoid clogging of screens and pipes.
